

REYMONDO CASTILLON JR

JUNIOR SOFTWARE
ENGINEER

PERSONAL BACKGROUND

I am a Father, a Husband, a Takoyaki Vendor and now a Junior Software Engineer.

From Broadcasting major to Software Engineering, It was not easy but I did persevere, I endured and I believe there's more to come.

I will learn, will grow and will be committed to my career.

PROJECT WORK

Blog app | Developer | Code URL | Live 2020

A blogging platform built on Ruby on Rails that allows the user to write, edit, update and publish blog posts.

- Integrated the use of a form, which allows the user to add new blog posts easily.
- Allowed users to delete existing posts and create comments to interact on the platform.
- Developed an add-on feature that allows users to upload photos to their blog posts.

Task app | Developer | Code URL | Live 2020

A Ruby on Rails task management application that allows the user to add, edit and track their tasks.

- Integrated signup and login features allowing users to securely store their tasks on their personal accounts.
- Developed a feature that restricts updating and deleting task categories to admin users.

Recipe Tracker app | Developer | Code URL | Live 2020

Recipe Application that enables the user to search for different food, track recipes, mark as favorite and add to a list.

- Integrated with a simple Recipe API that allows the application to extract recipe data
- Developed features that allows users to easily maneuver through pages and redirect to links.
- Allowed users to search for recipes and easily add recipe ingredients to their shopping cart.

Stock Trading app | Developer | Code URL | Live 2020

Stock Trading Application that allows users to purchase stocks using an API with a feature for market monitoring.

- Ensured buyers are given platform access upon sign up with the ability to purchase and view stocks.
- Allowed users to create accounts as a buyer, broker, or admin, which have respective functionalities.
- Enabled admins to view total transactions and users, and to approve eligible broker users for the platform.
- Implemented Rails ActionMailer to notify brokers once they are approved for platform access by admins.
- Developed a feature that allows users logged in as brokers to add stocks and view stocks.
